

Dear Hiring Team,

I am applying for a Senior or Staff Software Engineer position at your leading technology company. With over seven years of experience in cloud infrastructure and security tooling, I bring hands-on engineering expertise combined with technical leadership.

At Oracle Cloud Infrastructure, I led the design and optimization of internal scanners (SLAPS, MASS, ESP). These tools played a critical role in safeguarding multi-region services, with my improvements reducing latency by 40% and boosting uptime to 99.98%. I also contributed to secure patching workflows and mentored junior developers.

At Huawei Cloud, I supported SFS 2.0 by implementing privacy compliance and test automation for Red Line 3.0, cutting testing cycles by 50%. These efforts increased platform resilience and delivery speed.

As CTO of morescience, I led engineering for platforms like morerent and morejob. We applied compression and AI techniques to reduce resource usage, supporting large-scale data workloads while optimizing for privacy and sustainability.

My core skills include Python, Go, C++, cloud systems, and backend architecture. I thrive in solving system-level problems and guiding technical decisions.

I'm eager to bring this experience to a high-impact engineering team. Thank you for considering my application.

Sincerely,

Yuxuan Zhou
