Dear Hiring Manager,

My name is Yuxuan Zhou, and I'm an engineering leader with seven years of experience delivering backend systems, leading infrastructure security initiatives, and managing product engineering teams.

At Huawei Cloud, I led testing automation for SFS 2.0 and managed Red Line 3.0 privacy compliance across QA, platform, and security orgs. I introduced validation tooling that cut review time by 45%, and mentored engineers to improve testing and documentation quality. I coordinated architecture hand-offs and security audits, contributing to higher team reliability and alignment.

At Oracle Cloud Infrastructure, I developed internal tools like SLAPS and ESP to support multi-region scanning and incident response. My work reduced latency and enabled automated patching in response to critical CVEs.

As CEO and CTO of morescience, I recruited three engineering teams and delivered full-stack AI platforms such as morerent and morejob. I led architecture design, investor pitching, and product launch. Our systems reduced infrastructure load while enabling privacy-aware data operations.

I believe in technical rigor, team empowerment, and aligning execution with product vision. I remain hands-on in design reviews, code mentorship, and delivery planning. I'm seeking an M2 opportunity to help scale engineering teams building trusted and secure infrastructure.

Sincerely,

Yuxuan Zhou

EDUCATION

- UIUC - MS, Electrical & Computer Engineering (ECE/CS Top 5 U.S.)

- University of Missouri - BS, ECE (ABET-accredited U.S. Engineering)

- UESTC - BS Coursework, Electronic Science (Top 10 Engineering Univ. in China)

- Humphreys University - MBA in IT (GPA: 4.0)
